Allium fimbriatum (Aliiaceae) complex
A revision of the Allium fimbriatum (Aliiaceae) complex
Dale W. McNeal 411

A new genus of Laboulbeniales (Ascomycetes) on a species of
Phalarichus (Coleoptera: Dryopoidea; Limnichidae), with a note on
mirror-image asymmetry in the order
Richard K. Benjamin 427

Wood anatomy of Hedysomum (Chloranthaceae) and the tracheid-vessel element transition
Sherwin Carlquist 447

The presence of taxol and related compounds in Taxus baccata native to the Ukraine (Crimea),
Georgia, and southern Russia
Thomas S. Elias and Vladislav V. Kozhenevsky 463

Phytochemical profile of Hydrostachys insignis (Hydrostachyaceae)
Ron Scogin 471

Aggregated cones in Pinus halepensis
Simcha Lev-Yadun 475

Nonglandular trichomes of Californian and Hawaiian tarweeds: surface ultrastructure and its
significance
Andrew A. MacLachlan and Sherwin Carlquist 487

The name of the journal, *Aliso*, is the word used by the early Californians for the sycamore (*Platanus racemosa*), a tree associated with the Rancho Santa Ana Botanic Garden. In other areas *Aliso* refers to the alder (*Alnus* sp.).

**Allium fimbriatum**

*Allium fimbriatum* (Aliiaceae) complex. The morphological features used to distinguish between the two species in *Allium sanbornii* and *A. abramsii* were described. Some of these features are specific to each taxon. Distribution maps are shown, and a key to the species is included. Key words: Allium, *A. sanbornii*, *A. abramsii*, California distribution, morphology, taxonomy.
