## in fin ity

How can any thing  
Made up of no thing  
Amount to some thing?

(A whole is the limit of  
the sum of its parts)

And infinite sum of the little bits  
each bit a little bit less  
until it is less than the least little bit  
you can imagine  
and yet still less  
but never zero  
never nothing  
always something

imagine something  
smaller than the smallest  
you can tell me how small  
I'll tell you how close  
and I'll get even closer  
and then get even  
closer  
How close til I'm actually there?

Do we jump  
or glide  
from here to there  
form now to then?

Is time a sequence of moments?  
A stream a collection of drops?  
What is it waves  
in the ocean?  
in the boundless sea  
of infinity  
where things happen  
that don't
